

Navakanth Boyina

PROFESSIONAL SUMMARY

- Dynamics 365 Developer and Azure Software Engineer with around 6+ years of extensive experience in the installation, configuration, customization, extension, deployment, troubleshooting, and production support of Microsoft Dynamics CRM / Dynamics 365 enterprise applications. Strong expertise in developing complex Dynamics 365 solutions, including entity customization, forms, views, dashboards, workflows, business process flows, plugins, custom actions, and custom workflow activities.
- Hands-on experience in developing PCF (PowerApps Component Framework) controls using TypeScript to enhance Model-Driven App user interfaces and modernize legacy JavaScript customizations. Extensive experience in designing and implementing Azure Function Apps, Azure Logic Apps, and Azure Service Bus-based integrations for serverless business logic, asynchronous processing, and external system integrations.
- Proven background in building and supporting Azure-based and CRM-integrated solutions using C#, .NET, Azure Functions, Logic Apps, Service Bus, SQL Server, and Azure SQL Database. Experienced in writing T-SQL queries, joins, views, stored procedures, and SQL-based validation scripts for reporting, troubleshooting, integrations, data migration, and bulk data operations across DEV, UAT, and production environments.
- Skilled in developing Power Apps Canvas Apps, Model-Driven Apps, PCF controls, and Power Pages, as well as integrating external systems using REST and SOAP Web APIs. Strong exposure to requirements analysis, technical design, effort estimation, stakeholder collaboration, and enterprise production support, with excellent analytical, communication, and problem-solving skills.

Technical Skills:

Microsoft & Power Platform	Microsoft Dynamics CRM / Dynamics 365 (Online), Dataverse, Model-Driven Apps, Canvas Apps, Power Pages, Power Automate, Power BI, PCF (PowerApps Component Framework)
Web Technologies	HTML, CSS, JavaScript, TypeScript, jQuery, AJAX, REST, SOAP
Programming & Frameworks	C#, .NET Framework, ASP.NET, Plugins, Custom Workflow Activities (Code Activity), Custom Actions
Database & Reporting	SQL Server, Azure SQL Database, FetchXML, SSRS, SSIS
DevOps & Tools	Azure DevOps, Git, Visual Studio, XRM Toolbox, Plugin Registration Tool, Ribbon Workbench
Reporting Tools	SQL Server Reporting Services (SSRS), Visual Studio, Azure DevOps, Git, SSIS
Azure	Azure Functions, Azure Logic Apps, Azure Service Bus, Azure Data Factory, Azure Storage, Managed Identities, Azure DevOps (CI/CD Pipelines)
Operating System	Windows

PROFESSIONAL EXPERIENCE

P2P Softtek LLC

August 2024 to Present

Role: MS Dynamics CRM Senior Consultant

Responsibilities:

- Worked as a Dynamics 365 / enterprise application developer supporting large-scale Microsoft CRM systems across DEV and UAT environments, ensuring stability and operational reliability.

- Actively troubleshoot and resolved high-priority CRM issues, including plugin failures, configuration defects, workflow errors, and data migration inconsistencies.
- Performed root-cause analysis in collaboration with Microsoft stakeholders and cross-vendor teams, validating fixes and supporting stable releases.
- Designed and supported Azure Functions to implement serverless business logic and background processing triggered by Dynamics 365 events.
- Implemented Azure Service Bus for asynchronous and long-running integrations between Dynamics 365 and downstream enterprise systems.
- Developed and optimized SQL Server and Azure SQL queries to support Dynamics 365 CRM data validation, reporting, troubleshooting, and integration activities.
- Integrated .NET / C# services and Azure Functions with SQL Server and Azure SQL Database for backend processing, audit tracking, exception logging, and CRM data operations.
- Used T-SQL, joins, views, stored procedures, and indexing concepts to analyze CRM-related data issues, validate migrated records, and reconcile data across DEV, UAT, and production environments.
- Developed and maintained Azure Logic Apps to orchestrate integrations, automate workflows, and improve system reliability.
- Built and enhanced custom Dynamics 365 plugins, custom actions, and custom workflow activities (Code Activity) using C# and .NET, following best practices for performance and error handling.
- Developed PCF (PowerApps Component Framework) controls using TypeScript to modernize Model-Driven App UI and replace legacy JavaScript customizations.
- Supported CRM Portals / Power Pages by migrating legacy .NET applications, implementing custom web pages, and configuring portal security (Web Roles, Table Permissions).
- Assisted with data migration activities, validation, and environment consistency checks across multiple CRM environments.
- Participated in bug verification, regression testing, and deployment validation, ensuring smooth releases and minimal production impact.
- Utilized Azure DevOps for work item tracking, source control, and CI/CD-based solution deployments.
- Contributed to continuous improvements in performance, maintainability, and operational support of enterprise CRM applications.

Environment: Microsoft Dynamics CRM 365, CRM SDK, Visual Studio 2022, C#, Asp.net, SSRS, JavaScript, Fetch XML, SQL Server, Office 365, XRM Toolbox, CRM REST Builder, Ribbon Workbench 2016.

ZenithIQ Technologies

July 2021– August 2024

Client: NJEDA

Role: Software Engineer

- Delivered end-to-end customization and enhancement of D365 Sales module, improving visibility and consistency across the sales pipeline.
- Designed and implemented custom plugins (C#) across multiple execution stages to enforce business rules and ensure accurate data processing for Leads and Opportunities.
- Built and optimized Business Process Flows (BPFs) to standardize lead-to-opportunity conversion and enforce stage-level validations.
- Developed Power Automate workflows for lead assignment, approvals, and notifications, reducing manual effort and improving response time for sales teams.
- Customized forms, views, dashboards, and security roles to align with business processes and organizational structure.
- Executed D365 Sales data migration for Leads, Accounts, Contacts, Opportunities, and Products, ensuring data quality through validation and deduplication.
- Defined data mapping and transformation logic between legacy systems and Dataverse to maintain accurate pipeline and reporting data.

- Integrated Dynamics 365 with external systems using REST APIs, enabling reliable synchronization of customer and sales data.
- Resolved production issues related to plugins, workflows, and data inconsistencies, improving system stability and user experience.
- Managed CI/CD-based solution deployments across DEV, UAT, and PROD environments, ensuring consistent and reliable releases.

P2P Softtek LLC

March 2019 – December 2021

Role: MS Dynamics CRM Senior Consultant

Responsibilities:

New Hampshire Division of Motor Vehicles handles complaints of driving license holders of New Hampshire state, vehicle registrations, Temporary plates, boat registrations.

- Design, develop, configure, and implement Microsoft Dynamics Customer Relationship Management (CRM) System.
- Develop Microsoft Dynamics CRM with entity customization, CRM forms, screens, views, workflows, dashboards, and reports development using JavaScript, C#, HTML, and CSS.
- Developed Interactive UI Screens using Canvas Apps
- Have worked on azure components like logicapps and Function Apps.
- Worked on 3rd Party Integrations using Web API.
- Created Plugins and fixed existing bugs in the plugins.
- Converted existing HTML pages to power pages.
- Worked on Configuring Azure Devops Pipeline for solution deployment.
- Worked with MS Dynamics Out of the box reports. deployed them into MS CRM.
- Worked on Power Automate flows.
- Developed omnichannel chat channels for several teams.
- Created Dashboards, Views, Reports, charts, and all the security roles and users accordingly in the system based on roles.
- Develop, debug, and test the custom workflows and plugins by using C#, Sdk, and Plug-in Registration tool.
- Configuration of MS Dynamics CRM solution with Microsoft Outlook using Server-Side Sync.
- Work with users to obtain and document requirements by creating artifacts such as Use Cases, User Stories and Requirements Definitions.
- Working on hands-on development and troubleshooting with Microsoft Visual Studio
- Configuration of MS Dynamics CRM solution with Microsoft Outlook using Server-Side Sync.
- Configured mailboxes for different markets, created teams along with associated data, and used the Data Migration Tool to package and transfer this data to more advanced environments.
- Used Microsoft Flows for routing emails to queues.
- Unit Testing using Microsoft Fakes.
- Upgraded the Dynamics system to UCI.

Environment: Microsoft Dynamics 365 CRM UCI (Online), Dynamic 365, Custom Entity, USD, JavaScript, jQuery, ASP.NET, CRM SDK, Microsoft .NET 4.0, C#, WCF, SQL Server 2012, Web API 2, LINQ, SSIS, SSRS SQL 2008 R2 engine, Visual studio 2015,2017,2022.

Education:

Master of Business Administration at WestCliff University (USA)

Master's in Computer Science at Indiana University Bloomington (USA)

Bachelor of Technology in computer science at Lovely Professional University (India)
